

## Module 2

# Learning Computer Basics and the Internet

**Description:** Technology literacy involves being able to use technology such as computers to communicate, solve problems, and collect, organize, and share information. This course provides many hands-on opportunities for you to explore and discover how to use the computer to write (word processing), to create presentations (multimedia), and to solve mathematical problems (spreadsheets). The objective of this module is for you learn the basic components of a computer, discover the fundamentals of an operating system, and develop Internet navigation skills.

Discuss what happened during the last module. Preview this module and understand how it relates to the previous module.

## Pair and Share: Reflecting on Module 1

Share your answers to the Take-Home Exercise: Reflecting on Module 1 with a colleague and the whole group as directed. Record any new and good ideas on the lines that follow.

After participant partners exchange answers and provide feedback to each other, the facilitator will ask a few pairs to share with the whole group.
