PBL_M2_L1_A2_02_grab_b.png

Understand measurable attributes of objects and the units, systems, and processes of measurement.	<ul style="list-style-type: none"> understand such attributes as length, area, weight, volume, and size of angle and select the appropriate type of unit for measuring each attribute; understand the need for measuring with standard units and become familiar with standard units in the customary and metric systems; carry out simple unit conversions, such as from centimeters to meters, within a system of measurement; understand that measurements are approximations and how differences in units affect precision; explore what happens to measurements of a two-dimensional shape such as its perimeter and area when the shape is changed in some way.
---	--

PBL_M2_L1_A2_02_grab_c.png

Formulate questions that can be addressed with data and collect, organize, and display relevant data to answer them	<ul style="list-style-type: none"> design investigations to address a question and consider how data-collection methods affect the nature of the data set; collect data using observations, surveys, and experiments; represent data using tables and graphs such as line plots, bar graphs, and line graphs; recognize the differences in representing categorical and numerical data.
Select and use appropriate statistical methods to analyze data	<ul style="list-style-type: none"> describe the shape and important features of a set of data and compare related data sets, with an emphasis on how the data are distributed.

PBL_M2_L1_A2_02_grab_d.png

Instructional programs from prekindergarten through grade 12 should enable all students to—	In grades 6–8 all students should—
<ul style="list-style-type: none"> Understand numbers, ways of representing numbers, relationships among numbers, and number systems. 	<ul style="list-style-type: none"> use flexibility with fractions, decimals, and percents to represent and solve problems involving arithmetic operations and other representations; develop strategies for percent (see 6.RP.B.3c); use ratio reasoning to convert measurement units; apply scale factors to ratios and rates; use proportional reasoning to solve problems involving scale drawings and corresponding ratios, and to find unknown attributes in similar figures.

PBL_M2_L1_A2_02a.png

Specify locations and describe spatial relationships using coordinate planes and other representational systems.	<ul style="list-style-type: none"> use coordinate geometry to represent and examine the properties of geometric shapes; use coordinate geometry to examine special properties and relationships in plane figures with parts of parallel or perpendicular sides; describe sizes, positions, and orientations of figures using mathematical language, drawings, and models such as flowcharts, slides, and turns; examine the congruence, similarity, and line of rotational symmetry of figures.
Apply transformations and use symmetry to analyze mathematical situations.	<ul style="list-style-type: none"> The Grade 8 Curriculum (see 8.G.A.3) includes the following: <ul style="list-style-type: none"> transformations including reflections across lines and rotations about points; analyze transformations and congruence and similarity of two-dimensional figures using mathematical language and symbols; use visualization, spatial reasoning, and geometric modeling to solve problems.

PBL_M2_L1_A2_02b.png

Expectations	
Instructional programs from prekindergarten through grade 12 should enable all students to—	In grades 6–8 all students should—
<ul style="list-style-type: none"> Understand measurable attributes of objects and the units, systems, and processes of measurement. 	<ul style="list-style-type: none"> understand both metric and customary systems of measurement; select and use appropriate units and tools to measure length, area, surface area, and volume; solve common benchmarks to estimate measurements; select and apply techniques and tools to accurately find length, area, volume, and angle measures to appropriate levels of precision; solve problems involving scale factors, using ratio and proportion;
Apply appropriate techniques, tools, and formulas to determine measurements.	<ul style="list-style-type: none"> use common benchmarks to select appropriate methods for estimating measurements; select and apply techniques and tools to accurately find length, area, volume, and angle measures to appropriate levels of precision; solve problems involving scale factors, using ratio and proportion;
<ul style="list-style-type: none"> a series of simple problems investigating and discussing the need for such attributes as accuracy and density. 	<ul style="list-style-type: none"> use common benchmarks and formulas to determine measurements.
