

## Design and Discovery Thinking Creatively

Students now delve into their own projects as they learn to identify problems and come up with innovative solutions. In Session 7: The 3 R's of Problem Identification, students gather information about the problems they have identified through market research, narrow down their problem, and begin to develop a solution using brainstorming techniques. Session 8: A Brief Focus on Your Design Problem, helps students look at their design ideas from the perspective of the user as they continue to develop their projects. They then gather all of their ideas into one document, a Design Brief, which is used as a blueprint throughout their project development. In Session 9: A Solution Taking Shape, students have an opportunity to go on the Internet to explore other innovators and to search the patent Web site to see what ideas may be similar to theirs.
