

Data Assignment Worksheet

- 1) Think of three original questions that can be answered using the information from each learning center. Questions must require data analysis methods for at least two of the three questions.
- 2) Make sure one question addresses the environment (such as particulate pollution, efficiency, or consumption).
- 3) Construct three original graphs (one for each question) and explain the data analysis method used to answer the question.

My questions are unique and interesting.		
My questions are complex and require complex data analysis methods to answer them completely.		
My graphs clearly answer the questions. I used a graph for each question.		
I explained the data analysis method used for each graph and why I chose that method.		
I showed all my math work so that others can see how I derived my data.
