

Intel® Teach Program Master Teachers

Empower yourself to lead.

Join this select group of educators and make an impact on your community.

Share your expertise and make a difference.

As a Master Teacher, you attend a training and commit to deliver the course to colleagues in your local school system or district. All course materials and facilitation support are provided free of charge. We offer two courses designed to set the foundation for 21st century teaching and learning.

At the end of your training, you will be prepared to teach:

- **Intel® Teach Getting Started Course:** Ideal for K-12 classroom teachers with little or no computer experience, this course covers classroom software productivity tools and student-centered approaches to learning.
- **Intel® Teach Skills for Success Course:** Ideal for computer teachers who wish to develop students' 21st century learning skills—you'll receive training on student curriculum that develops digital literacy, critical thinking, problem solving, and collaboration skills.
