

Intel® Xeon® Processor E5-2600 Product Family

Software Ecosystem Support

March 2012

Legal Disclaimers

- Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor family, not across different processor families. Go to: http://www.intel.com/products/processor_number
- Intel, processors, chipsets, and desktop boards may contain design defects or errors known as errata, which may cause the product to deviate from published specifications. Current characterized errata are available on request.
- Intel® Virtualization Technology requires a computer system with an enabled Intel® processor, BIOS, virtual machine monitor (VMM). Functionality, performance or other benefits will vary depending on hardware and software configurations. Software applications may not be compatible with all operating systems. Consult your PC manufacturer. For more information, visit <http://www.intel.com/go/virtualization>
- No computer system can provide absolute security under all conditions. Intel® Trusted Execution Technology (Intel® TXT) requires a computer system with Intel® Virtualization Technology, an Intel TXT-enabled processor, chipset, BIOS, Authenticated Code Modules and an Intel TXT-compatible measured launched environment (MLE). Intel TXT also requires the system to contain a TPM v1.s. For more information, visit <http://www.intel.com/technology/security>
- Requires a system with Intel® Turbo Boost Technology. Intel Turbo Boost Technology and Intel Turbo Boost Technology 2.0 are only available on select Intel® processors. Consult your PC manufacturer. Performance varies depending on hardware, software, and system configuration. For more information, visit <http://www.intel.com/go/turbo>
- Intel® AES-NI requires a computer system with an AES-NI enabled processor, as well as non-Intel software to execute the instructions in the correct sequence. AES-NI is available on select Intel® processors. For availability, consult your reseller or system manufacturer. For more information, see <http://software.intel.com/en-us/articles/intel-advanced-encryption-standard-instructions-aes-ni/>
- Intel product is manufactured on a lead-free process. Lead is below 1000 PPM per EU RoHS directive (2002/95/EC, Annex A). No exemptions required
- Halogen-free: Applies only to halogenated flame retardants and PVC in components. Halogens are below 900ppm bromine and 900ppm chlorine.

Legal Disclaimers

- Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products.
- Intel does not control or audit the design or implementation of third party benchmarks or Web sites referenced in this document. Intel encourages all of its customers to visit the referenced Web sites or others where similar performance benchmarks are reported and confirm whether the referenced benchmarks are accurate and reflect performance of systems available for purchase.
- Relative performance is calculated by assigning a baseline value of 1.0 to one benchmark result, and then dividing the actual benchmark result for the baseline platform into each of the specific benchmark results of each of the other platforms, and assigning them a relative performance number that correlates with the performance improvements reported.
- SPEC, SPECint, SPECfp, SPECrate, SPECpower, SPECjAppServer, SPECjbb, SPECjvm, SPECWeb, SPECCompM, SPECCompL, SPEC MPI, SPECjEnterprise* are trademarks of the Standard Performance Evaluation Corporation. See <http://www.spec.org> for more information. TPC-C, TPC-H, TPC-E are trademarks of the Transaction Processing Council. See <http://www.tpc.org> for more information.
- Hyper-Threading Technology requires a computer system with a processor supporting HT Technology and an HT Technology-enabled chipset, BIOS and operating system. Performance will vary depending on the specific hardware and software you use. For more information including details on which processors support HT Technology, see [here](#)
- Intel products are not intended for use in medical, life saving, life sustaining, critical control or safety systems, or in nuclear facility applications. All dates and products specified are for planning purposes only and are subject to change without notice
- Intel product plans in this presentation do not constitute Intel plan of record product roadmaps. Please contact your Intel representative to obtain Intel's current plan of record product roadmaps.
- INFORMATION IN THIS DOCUMENT IS PROVIDED "AS IS". NO LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE, TO ANY INTELLECTUAL PROPERTY RIGHTS IS GRANTED BY THIS DOCUMENT. Optimization Notice

Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2®, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.

Notice revision #20110804

Software Support for the Intel® Xeon® Processor E5 Family

Software is ready!

- Performance and efficiency reflected in real world applications
 - More cores/threads
 - Reduced I/O latency and bandwidth
 - Higher memory bandwidth
- Intel® AVX providing performance boost for floating point performance intensive applications
 - In this presentation, look for this tag for AVX enabled apps 
- ISVs are adding AES-NI support to future products
- OS/VMM supporting new levels of performance and efficiency
- Platform capabilities help software vendors support cloud models
 - In this presentation, look for this tag for Cloud support 

Enhancing solutions from cloud to enterprise
to high performance computing

Contents

ENTERPRISE APPLICATIONS

Exasol EXASolution 4.0

High performance real-time database. Maximum performance, optimal scalability, low TCO, minimal administration.

Queries per time unit (x1000, Higher is better)

“The enormous growth in data volumes and the complexity of analysis requirements in today’s data warehouse market demand innovative database solutions with more efficient performance and scalability. Intel servers are designed from top to bottom to deliver maximum performance at minimum overhead. Looking at the performance of the Intel® Xeon® processor E5 family-based platform it shows clearly just how great the potential is for reducing spending on hardware and power consumption in cluster and virtualization environments. Put simply: the Intel® Xeon® processor E5 family-based platform delivers more performance other servers – so why invest more in hardware than you have to? EXASolution 4.0 and the Intel servers have once again shown that this combination is the right answer to growing market requirements.”

Steffen Weissbarth, CEO

Advanced integrated memory controllers and additional enhanced cores benefit modern real-time in-memory database applications like Exasol EXASolution

IBM SolidDB*

In-memory DataBase

Throughput in tps (best-to-best)

“Already extremely fast, solidDB increased performance by 30% when run on the Intel® Xeon® processor E5-2600 product family. Couple this with the up to 85% increase in performance realized when moving to solidDB version 7.0 that utilizes the Intel® Parallel Studio XE and the performance enhancement of the next generation solution is over 100%. We are pleased with the extreme speed.”

Joni Lehtomaki, solidDB Development Program Director, IBM

Naver* Search Engine

High Performance Search Engine

With the Intel® Xeon® Processor E5 family based platforms, the Search Engine retrieves huge amount of data on the fly

- Scales to accommodate many concurrent requests from search users
- Offers increased processing power and faster memory channel to deliver more search servers for efficient use

“Internal benchmark with Naver Search Engine demonstrates great scalability, performance and system capacity, showing to deliver as much as nearly 2x performance increase. Naver Search Service users can have benefit from Intel® Xeon® Processor E5 family-based platforms”

Yong-Jae Kwak, Lab. Leader, Search Platform Lab, NHN

"Bugyo V ERP" ERP application

奉行 V ERP™

OBC welcomes the launch of Intel® Xeon® processor E5 family-based platforms, which we believe are the best platform for "Bugyo" V ERP. Bugyo V ERP" is the high-end Bugyo series that satisfies the needs of large enterprises. Those companies have to unify ERP applications of group companies due to the requirement of IFRS.

Among our customers of Bugyo V ERP, we see more cases in which shared application is used in virtualization. Our test result shows that the Intel® Xeon® processor E5 family-based platforms can handle approximately 40% more users compared to the previous platform in such shared environment.

We believe we can provide our Bugyo V ERP customers a higher performance and more cost efficient solution with Intel® Xeon® processor E5 family-based platforms.

Shigeru NAKAYAMA, OBIC BUSINESS CONSULTANTS Co., Ltd., Executive Managing Director, General Manager of development department

Max# Supported Users Higher is better

Compared to the Intel® Xeon® processor 5600 series-based platforms, the Intel® Xeon® processor E5 family-based platforms:

- Process 1.43x users when Bugyo V ERP is used in a virtualized environment
- Support 1.22x users per 1 virtual OS

SAP Cryptolib

“With the Intel® AES-NI encryption enabled, we saw a 25% faster finish using a database consistency checkload with 20% less CPU utilization. Additionally, we experienced a fantastic 2.1x speedup of Encryption/Decryption compared to not using AES-NI.”

Jochen Haller, onDemand Security Officer SAP

Intel and SAP have been working collaboratively to ensure that performance is maximized even when all security features are enabled within SAP BusinessByDesign.

The new version of the SAP Cryptolib with Intel® AVX support speeds up performance of SAP BusinessByDesign’s security features as well as all ABAP and C-Based SAP components that require access to cryptographic software routines.

- **Additional changes to customer implementation other than updating with a service pack containing the new version of the library**
- **All new products delivered to customers after Q1 2012 will contain this new library. New service packs released after Q1 2012 will also have the new version of the library, and can be obtained as usual from the SAP Service Marketplace**

Dr. Sum EA 4.0 aggregates big data in high speed with a distributed processing architecture.

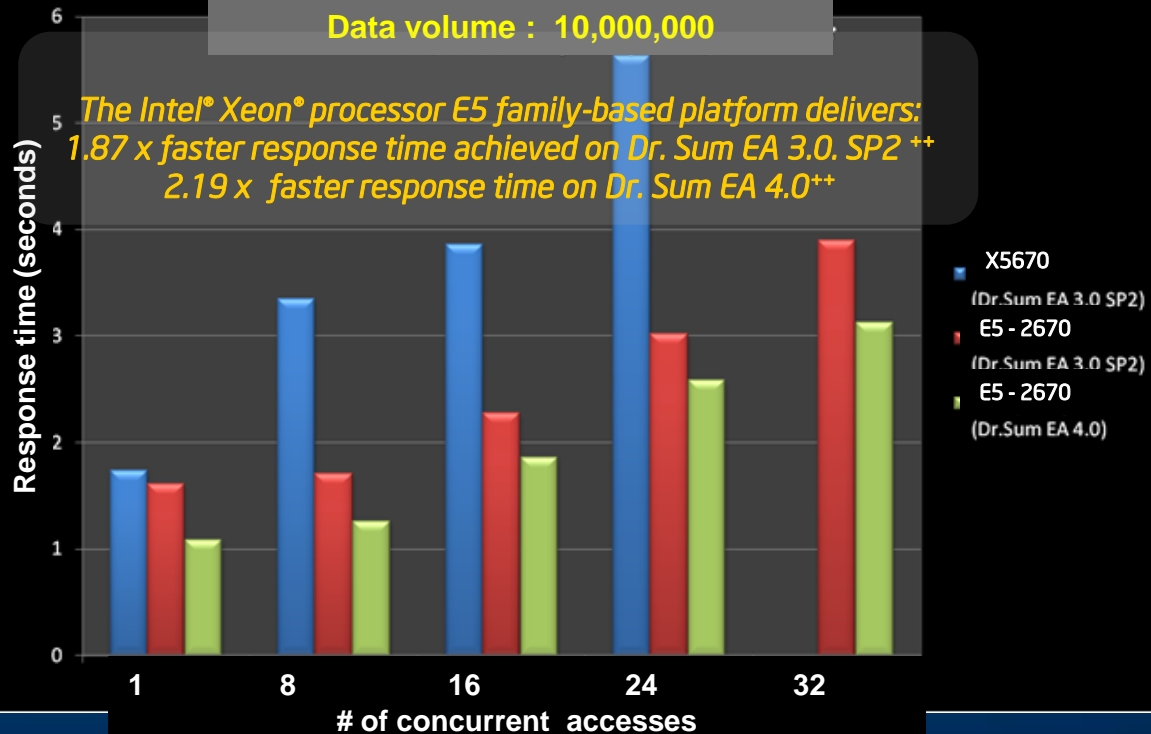

As Dr.Sum EA 4.0 was complied with Intel Composer XE, it provides great performance on the latest Intel platform.

Our test shows that Dr. Sum EA 4.0 experiences nearly 2x performance increase on the Intel® Xeon® processor E5 family-based server vs. the Intel® Xeon®5600 series based server.

We believe our customers will get immediate benefits with the combination of Dr. Sum EA 4.0 and the Intel® Xeon® processor E5 family-based platform. More managers at various levels can make timely analysis of large data sets to visualize the business and increase the company's agility.

Jun Tanaka, Chief Technical Officer, 1st Holdings, Inc. (WingArc's holding company)

Data volume : 10,000,000

High performance and scalability

- Response time is critical for BI tool.
- Customers want both high performance & cost efficiency even if data volume has increased dramatically.
- With Dr. Sum EA 4.0 that applied the latest Intel compiler, customers can enjoy even faster response time with the Intel® Xeon® processor E5 family based platforms.

***Compared to Dr. Sum EA 3.0 SP2 running on the Intel® Xeon® processor 5600 series based platform*

FINANCIAL SERVICES APPLICATIONS

Algorithmics

an IBM Company

Integrated Market and Credit Risk

Award-winning, real-time risk analysis

"Our latest benchmark results on the Intel® Xeon® processor E5-2600 product family demonstrates Algorithmics' continued commitment to improving our software performance and reducing the total cost of ownership for our clients. With industry-standard, low-cost hardware, global institutions can cost-effectively perform Monte Carlo risk simulations for their largest trading counterparties in a few minutes, and execute what-if risk profiles in milliseconds for pre-deal analysis on the trading room floor."

Neil Bartlett, Chief Technology Officer, Algorithmics, an IBM Company

Performance
increase
of up to
1.7 X*

Banks want to make more risk-aware decisions, and are running increasingly sophisticated risk analytics on demand.

Achieving performance increases on computationally intensive Monte Carlo risk analysis can help financial institutions to reduce their capital costs and operating expenses.

SunGard Ambit PATS

Cloud

FSI Virtualized Private Cloud Risk Management Solution

“We successfully collaborated with Intel to configure a virtualized private cloud. The cloud framework enables developers to run concurrent Asset & Liability Management (ALM) regression testing and validation. We were able to run 15 virtualized instances on the new Intel® Xeon® processor E5-2600 product family based platform versus 11 virtualized instances on the previous Intel® Xeon® processor 5600 series based platform; without any performance degradation. This is significant because it will enable SunGard’s software development team to properly size customer computing needs based on critical Risk calculation requirements. In addition, the ability to host 27% more virtual machines per server impacts SunGard’s Total Cost of Ownership for our private cloud solution because it reduces our operational costs.”

Jiaping Zhang – SunGard Risk and Performance Management

2011

**Best Liquidity Risk
& ALM Solution**

- **The SunGard Ambit Asset & Liability Management (ALM) Risk solution enables risk professionals to understand the impact of market changes on the balance sheet in order to make faster and more informed business decisions**
- **Provides outstanding calculation performance for today’s high-demanding risk analysis simulations**

Source: Published/submitted/approved results as of March 6, 2012. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. SunGard Ambit QFL

FSI Asset & Liability Risk Management Solution

AVX

“Regulatory mandates and the recent economic and sovereign debt crisis has led to a rise in banks re-evaluating their operational frameworks and risk management strategies. Today, risk management professionals demand high performance scalable solutions that enable timely, complex and dynamic modeling of customer behavior, economic valuation, interest rate scenarios and a wide range of other variables. With Intel’s new Intel® Xeon® processor E5 2600 product family based servers, SunGard’s Ambit Risk & Performance QFL solution achieved a 42% increase in performance as compared to previous benchmarks. Innovations such as Intel’s Advanced Vector Extensions (AVX) helps provide our customers the performance they will need to handle higher data volumes and complex risk calculations and models.”

Jo Osinga – SunGard Risk and Performance Management

2011

**Best Liquidity Risk
& ALM Solution**

- **The SunGard Ambit Asset & Liability Management (ALM) Risk solution provides complete balance sheet market risk, liquidity risk and performance measurement, incorporating economic value analysis and dynamic earnings simulations based on deterministic and stochastic scenarios.**
- **Provides more complex risk analysis simulations in less time for less cost**

High-resolution seismic imaging with superior scalability on E5-2680

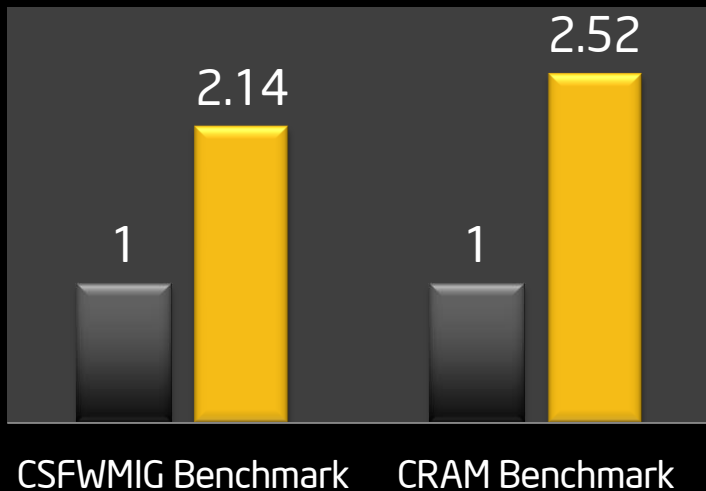

“The Paradigm™ GeoDepth® code exploits all the architectural features of the Intel Xeon E5-2600 product family based platform, including the Intel® compiler generated AVX instructions, and the Intel® Math Kernel Library. We are seeing excellent results on this innovative Intel Microarchitecture, enabling our Seismic Imaging and Processing customers to significantly reduce the time to solution for the imaging steps in seismic migration workflows.”

Duane Dopkin, Paradigm executive vice president, technology

Paradigm EPOS 4.1 Benchmarks

Relative Performance Higher is better

■ 6 core Xeon E5675 ■ 8 core Xeon E5-2680

Next level of performance in 3D seismic imaging solutions

The memory architecture of the Intel® Xeon® processor E5-2600 product family minimizes communication overheads, enabling all sixteen-cores on this dual socket platform to deliver linear scalability. Improved Hyper-Threading and Turbo technology delivers improved price performance.

Intel® AVX delivers significant speed up in FFT computations used in seismic imaging including those that use the full wave migration algorithm.

Geophysicists will experience significantly faster convergence of results with the increased scalability of the Intel Xeon Processor E5-2600 product family, enabling expedited generation of high-resolution images and reconstruction of seismic reflectivity in areas where complex wave-propagation occurs.

"ANSYS has worked with Intel to make sure our joint customers can leverage the new Intel® Xeon® Processor E5-2600 product family, running larger, higher-fidelity models to improve product quality. This new platform, with performance 60% or more over the prior Intel generation, is a powerhouse for a majority of workflows and is a welcome component of high-performance computing as a strategic technology for engineering simulation."

Joe Solecki, Vice President, Physics Business Unit, ANSYS, Inc

ANSYS Mechanical 14

Relative Performance
Higher is better

Intelligent Performance for structural/thermal simulation

The memory capacity of the Intel® Xeon® processor E5-2600 product family allows even the largest of workloads to be handled in-core, significantly improving run times.

Intel® AVX is delivering significant speed up in factoring and solving the FE assembly equations matrix which are floating point intensive.

Users will usually see significant reduction in simulation runtimes even for the largest of models due to the additional cores and larger memory capacity. This will allow customers to run larger, higher fidelity models in more iterations within a set time and cost constraints to improve their product quality and enable innovation.

CD-adapco STAR-CD* Industry Leading Performance on E5-2680

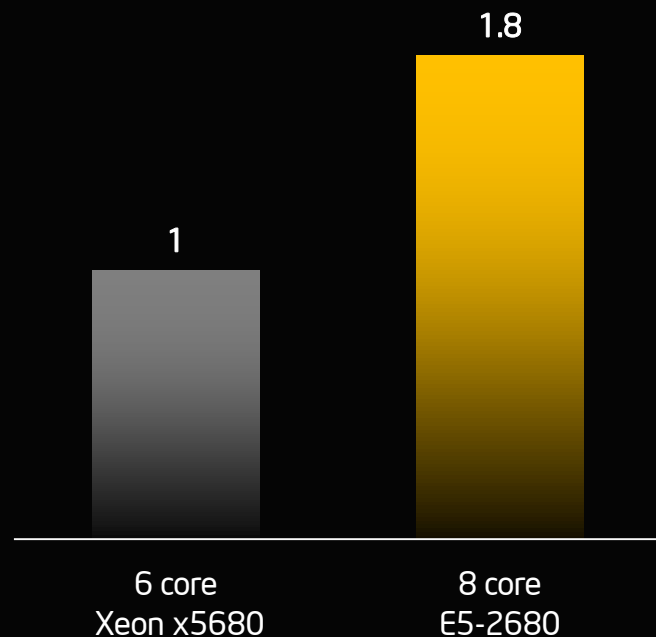

Intelligent Performance for CFD simulation

Increased memory bandwidth of the Intel® Xeon® processor E5 family-based platforms series allows much better utilization of its computational resources, significantly improving run times.

Users will usually see significant reduction in simulation runtimes due to the additional cores and larger memory bandwidth.

System with two Intel® Xeon® processor E5-2680 based platforms processors brings up to 1.8x speedup compared to a similar system based on previous generation Intel® Xeon® processor X5680 based platforms processors, diminishing the simulation/prototyping time and reducing the time-to-market in manufacturing.

STAR-CD 4.16.023
A-class
Relative performance - Higher is better

Source: Published/submitted/approved results as of March 6, 2012. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. “ICON FOAMpro external aerodynamics simulation on the new Intel E5-2600 series is giving astonishing results. To enable a 2X speed-up with less nodes and lower frequencies is a great achievement. This kind of progress will allow our engineers to benefit of unforeseen precision in our simulations.”

J. Papper, Software & Methods Development Manager, ICON

CFD with ICON FOAMpro is a key ingredient in automobile manufacturing to simulate the airflow to improve aerodynamics and fuel consumption without expensive prototyping.

Faster processing speed helps decrease turn-around and increase simulation precision.

Abaqus/Explicit

Abaqus/Standard v6.12-PR3 (beta SW)
Relative Performance
Higher is better

Abaqus/Explicit is a finite element analysis product that is particularly well-suited to simulate brief transient dynamic events such as consumer electronics drop testing, automotive crashworthiness, and ballistic impact. It is designed for production environments, so ease of use, reliability, and efficiency are key ingredients in its architecture.

Users will usually see reduction in simulation runtimes due to new AVX vector instructions and additional cores. This will allow customers to run larger, higher fidelity models in more iterations within a set time and cost constraints to improve their overall product quality and enable innovation.

“The new Intel® Xeon® processor E5 family-based platform(s) doubles the speed of cellular image analysis.”

*Dr. Martin Daffertshofer, Global Product Manager Software,
PerkinElmer Cellular Technologies Germany GmbH*

Execution Time (Lower is better)

In drug discovery today analysing images of living cells is one of the most CPU extensive processes.

The new Intel® Xeon® processor E5 family-based platform doubles the speed of cellular image analysis.

It's ideally suited for interactive and automated processing of huge image data to support the discovery of new drugs.

2x higher throughput reduces the cost of drug discovery and increases throughput in terms of tested drugs

Intel Corporation

*Other names and brands may be claimed as the property of others

The Intel® Xeon® processor E5-2600 product family has demonstrated a substantial performance multiple when compared to the previous generation Intel Xeon processor X5600 series in High Performance Computing applications. On Synopsys' highly scalable Proteus Computational Lithography engine, which analyzes and modifies full chip design databases prior to manufacturing, the Intel Xeon processor E5-2600 product family outperforms the Intel Xeon processor X5600 series by a factor of up to 1.55x in throughput. Over the past 8 years, Synopsys' Proteus application running on Intel Xeon family of processors has shown a 25x performance improvement. By leveraging such advances in Intel CPU performance from generation to generation, Proteus users are able to improve their turn-around-time while keeping the cost of ownership low by avoiding expensive custom hardware solutions.”

Dr. Howard Ko, Sr. VP & GM, Silicon Engineering Group, Synopsys, Inc

HEALTHCARE

GE Healthcare - Ultrasound

AVX

“The Intel® Xeon® processor E5 family-based platform allows us to scale our ultrasound back end software to the highest levels of scalability. This is a critical component of our system that enables to perform extremely intensive processing in real time using deep parallelization and vectorization.”

Arcady Kempinski, Architect Ultrasound Israel, GE Healthcare

Intel® AVX has been critical factor to be able to enhance performance of image processing for ultrasound algorithms compared to the previous platform.

Intel® Xeon® processor E5 family-based platforms allows for usage of enhanced image quality for 2D and 3D real time ultrasound. Physicians can make use of enhanced clinical protocols due to the new platform.

“As Carestream is shifting its focus to cloud based medical imaging archiving, teleradiology, and image distribution – we find that the new Intel® Xeon® processor E5 family-based platform is helping us provide excellent service at very affordable prices.

Today, with the increase in CPU performance, we are also able to provide full server side rendering for image distribution - using a zero footprint HTML5 based viewer – either from the Carestream cloud or directly on-premise.

In general we see that the CPU performance has doubled compare to the Intel® Xeon® processor 5600 series-based platforms we used to deploy.”

Noam Velan, Director of R&D, Carestream Health, HCIS Division

Carestream – SuperPACS is a scalable web-based platform for reading, reviewing, 3D processing, archiving and distribution of radiological imagery.

The product employs high-performance computer vision algorithms, that make extensive use of Intel multithreading and SIMD technology.

Neusoft CT

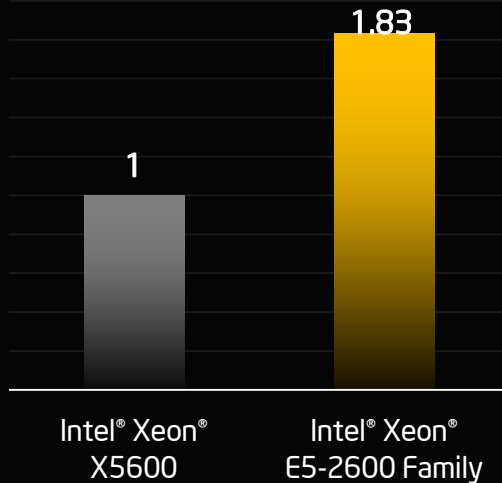

Healthcare

AVX

“It is amazing to see that Intel® AVX on the new Xeon processor E5-2600 product family greatly reduces the latency for a doctor to gain the high quality diagnostic volume images, and helps them to make the right decision in the shortest time.”

*Shuangxue Li, Vice President of Neusoft Medical Systems Co., Ltd.,
General Manager of Diagnostic Imaging Systems Division*

Images per Second
(Higher is better)

Neusoft CT gains record breaking performance with Intel® Xeon® Processor E5-2600 product family: 1.83X performance improvement comparing to previous Intel® Xeon® Processor 5600 series

Intel® AVX optimization boosts performance by 1.24X, it shows great performance improvement comparing to previous SSE implementation.

Intel® Xeon® Processor E5-2600 product family product family achieves 1.61X performance per watt improvement comparing to Intel® Xeon® Processor 5600 series

Miniature microscope

“The new Intel® Xeon® processor E5 family-based platform enables us to support advanced image processing algorithms necessary to for 3D visualization during minimally invasive neurosurgery. The scalability of the architecture combined with SIMD Intel® AVX instructions allowed us to advance our algorithms and enable full stereo dual stream processing in real time at high frame rates required for surgery.”

Alex Chanin, President and CEO, Visionsense

Image Enhancement AVX vs SSE Lower is Better

The Visionsense VSii system is a complete solution enabling surgeons to use a minimally invasive stereoscopic (3D) camera, for neurosurgical applications

The new Intel® Xeon® processor E5 family-based platform allows the real time processing of the video image using state of the art image processing algorithms. The platform enables linear scalability using the 16 cores (2 processors) with minimal overhead.

The new Intel® AVX commands allows performing some algorithms at close to 100% faster compared to a non AVX version.

Intel® Xeon® processor E5 family-based platforms allow the delivery of extremely high quality high definition stereoscopic video to the surgeon in real time with minimal latency. The processed stereoscopic image retains the natural depth information and allows the surgeon the best possible view of the surgical site whilst retaining a minimal invasive approach.

Intel® AES-NI End User Testimonials

"We need a way to scale our encryption capabilities to handle more data, from more customers, without affecting end-user performance. Using Intel® AES-NI, we can scale our services and protect information while sustaining high performance."

Janakan Rajendran, CIO, GNAX Health

"With the launch of new cloud services, we needed a more powerful security system to protect the user's private data. That is why we chose the hardware-based Intel® AES-NI powered by Intel® Xeon® processors."

- Nam-Seuk Han, Head of the Information Technology R&D Center, SK Telecom
