Source: Intel estimates as of Nov 2008. Performance comparison using SPECjbb2005 bops (business operations per second). Results have been estimated based on internal Intel analysis and are provided for informational purposes only. Any difference in system hardware or software design or configuration may affect actual performance. For detailed calculations, configurations and assumptions refer to the legal information slide in backup.

A portrait of Bill Laing, a man with short hair, wearing a dark blue sweater over a white collared shirt. He is smiling slightly and looking towards the camera. The background is a solid blue color.

Microsoft®

"We're very excited about the release of the Intel Xeon 5500 processor, built on the new Intel Nehalem Microarchitecture. The complementary features of Windows Server 2008, Hyper-V, and the Intel Xeon 5500 series processors will provide our mutual customers with exceptional performance, energy efficiency, and flexibility, so they can achieve even greater cost savings."

* Up to 125% higher compute performance, 50% idle power, and up to 2X virtualization performance are based on comparison to previous generation 5400 series. Lower cooling cost based on Intel internal analysis (January 2009). For detailed calculations, configurations and assumptions refer to the legal information slide in backup.

"We are excited about the evolutionary road VMware and Intel are helping to pave for our customers by combining the new Intel Xeon Processor 5500 Series with VMware's forthcoming vSphere generation of products. Together, our products provide a power-efficient, high-performance, platform for the datacenter and the cloud that enables our joint customers to do more with less - providing new levels of efficiency, control and choice for them to run their datacenters effectively."

Intel™ Xeon™ 5500 Series: Powering Leading China Internet Portal

"To enable continuous business growth, we have developed the new generation of distributed search architecture based on Intel Xeon 5500 and Intel SSDs. During search application testing, we're excited to see about 100% performance boost and 120% higher performance per watt. Currently, we're deploying hundreds of Intel Xeon 5500-based servers to meet upcoming rapid traffic growth."

— Zhou Lin, Sohu Senior Technical Director

Intel™ Xeon™ 5500 Series: Advancing Online ERP / SaaS in China

*"It's really amazing for UFIDA Online ERP Service to get **3.37x performance boost and 3.36x performance per watt boost** on the new Intel Xeon 5500 EP platform. The amazing results show that the new Xeon 5500 EP is certainly the preferred platform for our online service and high performance will certainly greatly impress our customers."*

Larrabee

- Intel's first many-core architecture
 - Designed for high throughput applications
 - Expect many derivatives overtime
- A highly differentiated architecture
 - Programmable graphics pipeline enables developer innovation and stunning visual effects
 - IA programmability provides great flexibility
 - Fully coherent cache architecture
 - Standard API support (DirectX*, OpenGL*, OpenCL*)

First Discrete Graphics Products In Late 2009 Or 2010

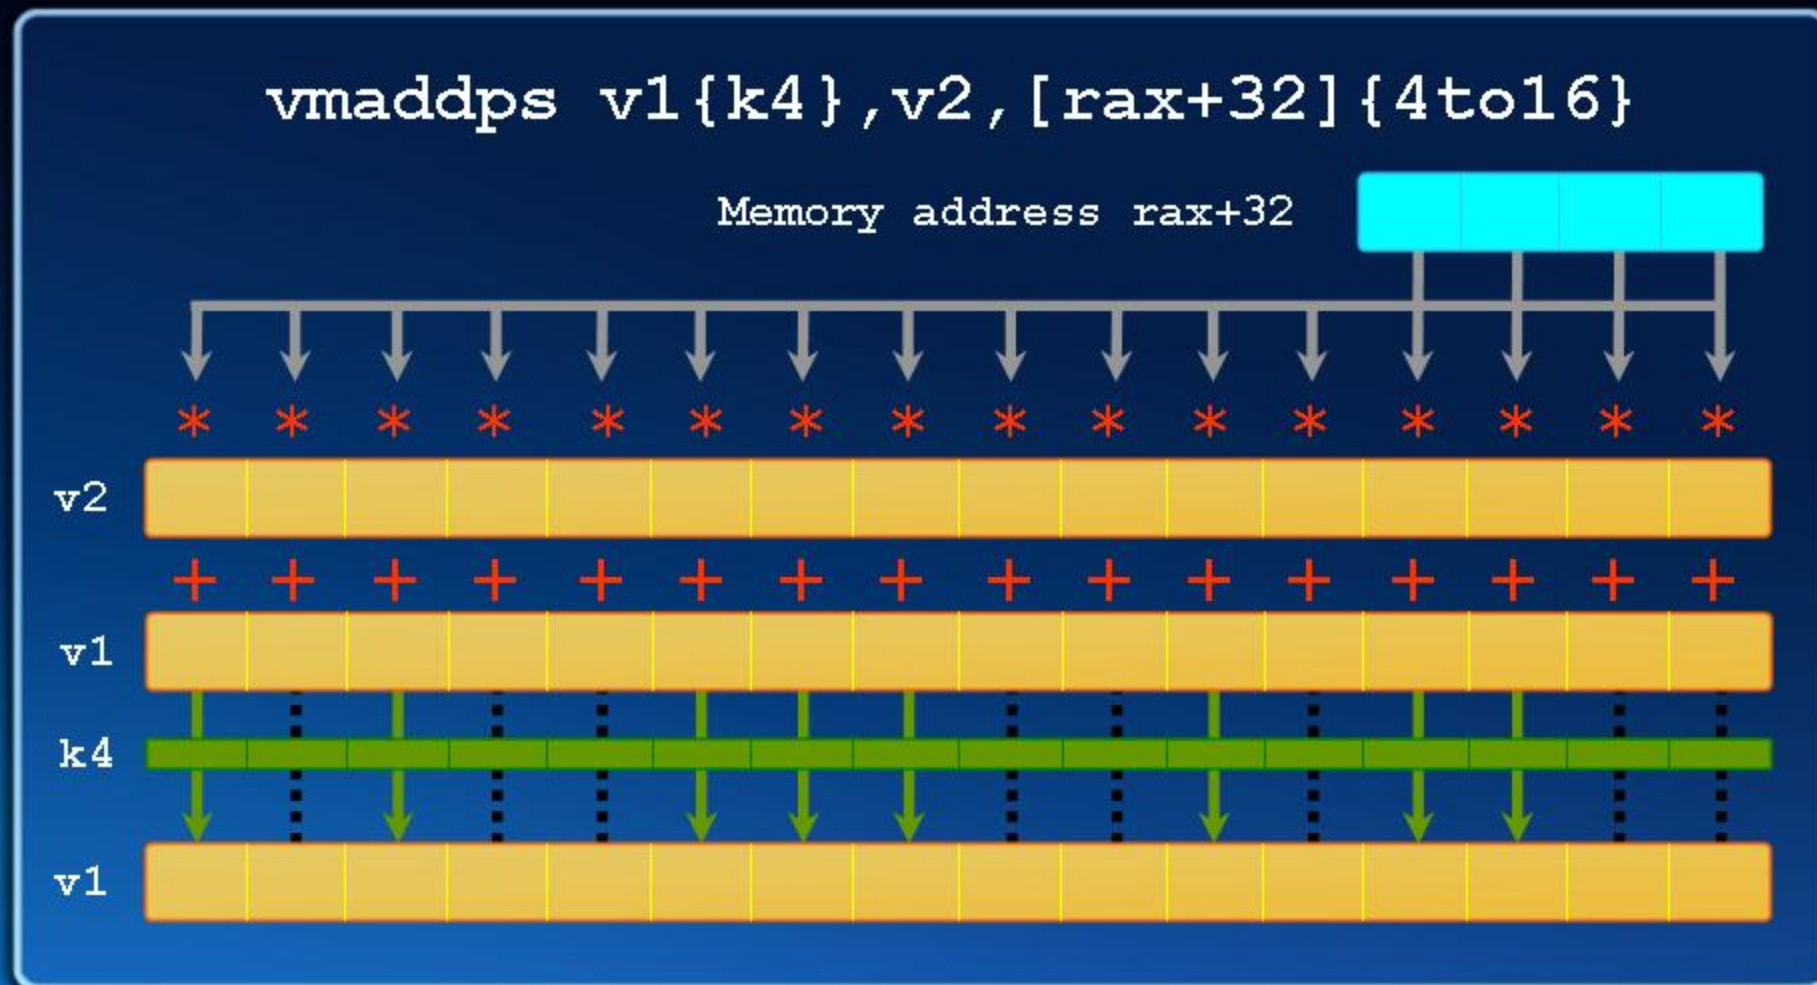

Prototyping on Larrabee

- C++ Larrabee Prototyping Library
 - Released at Game Developer's Conference, 27 Mar '09
- Enables early Larrabee code exploration and prototyping
 - Gives developers deep insight into the architecture and efficiency

Now Available on www.intel.com/software/graphics

C++ Larrabee Prototype Library

- 100+ Vector instructions
- Ex: 512 bit SIMD 
- Load-op 
- Format conversion
- Broadcast/swizzle 
- Ternary 
- Multiply-add 
- Predication 
- Gather/scatter support

Developed with Software Developers to Deliver the Programmability they Need most

Ct: Superior Data Parallel Programming Solution

- Avoid parallel programming pitfalls
- Develop readable programs
- Scale from dual-core to many-core

Ct: The Right Way to Do Data Parallelism

Announcing: Ct Technology Going Into Intel Tools

Data Parallel Programming for Multi-core and Many-core Processors

- Productive data parallel programming
 - High level abstraction for ease of use
- Investment protection
 - Performance scaling from dual-core to many-core CPUs
- C++ extended by standard use of templates
 - No changes to standard C++ compilers
- Complements software tools from Intel and others
- Product beta by EOY 2009

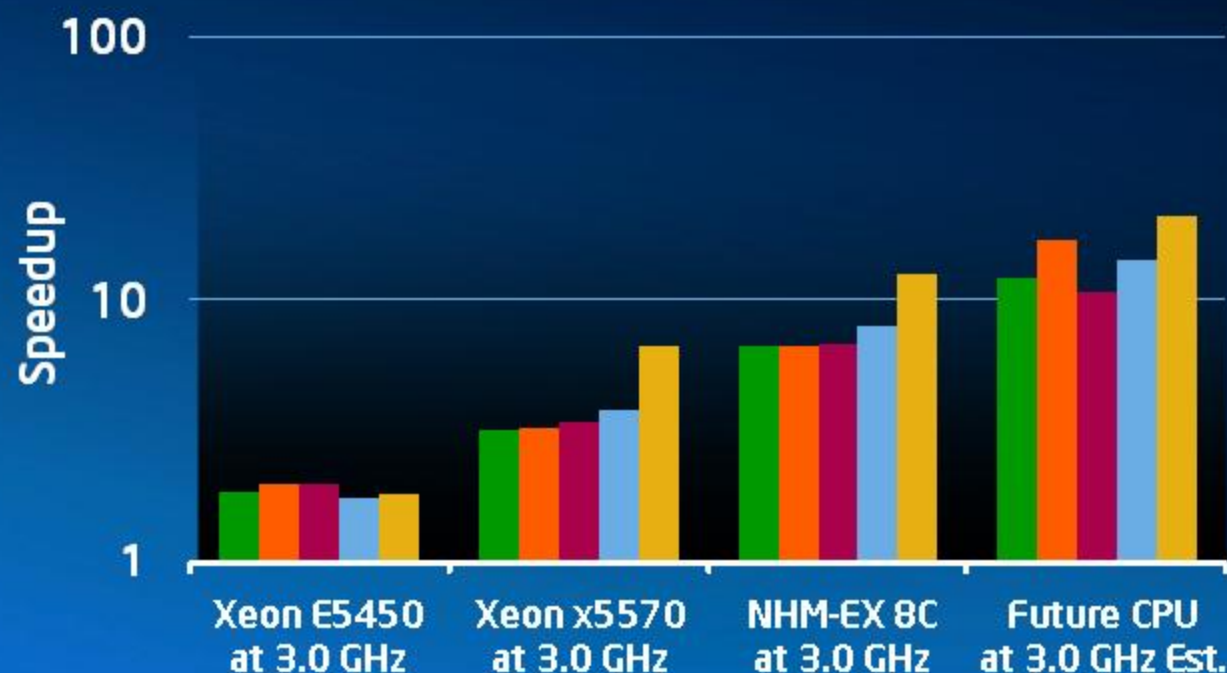

Bringing New Capabilities to Data Parallelism

Forward-Scaling Data Parallel Performance

No Recompile Or Processor-specific Coding Required!

Industry Feedback on Ct Technology

"Intel's Ct technology will help us take full advantage of the power of data parallelism and will help us quickly scale our applications into the future."

— Xia Zhang, Neusoft CTO

"Ct is a breakthrough capability. As the underlying hardware platform evolves, we would like to take advantage of Ct's ability to scale, so we can build high-performance financial algorithms that protect our investment."

**— Jeffrey M. Birnbaum, Managing Director,
Bank of America**

"Ct represents an essential new development for the future of parallel programming and we believe Ct will become one of the cornerstones of CERN's future programming environment."

**— Prof. Dr. Volker Lindenstruth,
Chair of Computer Engineering, Univ of Heidelberg,
Head of ALICE High Level Trigger**

"We believe Intel's Ct, is an exciting new technology for data-intensive computing environments such as seismic imaging."

— Laurent Clerc, VP Technology Services, CGGVeritas

Accelerate Design Of Nehalem Micro-architecture Based Products

Legal Disclaimers

Performance tests and ratings are measured using specific computer systems and/or components and reflect the approximate performance of Intel products as measured by those tests. Any difference in system hardware or software design or configuration may affect actual performance. Buyers should consult other sources of information to evaluate the performance of systems or components they are considering purchasing. For more information on performance tests and on the performance of Intel products, visit <http://www.intel.com/performance/resources/limits.htm> or call (U.S.) 1-800-628-8686 or 1-916-356-3104.

Relative performance is calculated by assigning a baseline value of 1.0 to one benchmark result, and then dividing the actual benchmark result for the baseline platform into each of the specific benchmark results of each of the other platforms, and assigning them a relative performance number that correlates with the performance improvements reported.

SPEC, SPECint2006, SPECfp2006, SPECjbb, SPECWeb are trademarks of the Standard Performance Evaluation Corporation. See <http://www.spec.org> for more information. TPC-C, TPC-H, TPC-E are trademarks of the Transaction Processing Council. See <http://www.tpc.org> for more information.

Intel® Virtualization Technology requires a computer system with an enabled Intel® processor, BIOS, virtual machine monitor (VMM) and, for some uses, certain platform software enabled for it. Functionality, performance or other benefits will vary depending on hardware and software configurations and may require a BIOS update. Software applications may not be compatible with all operating systems. Please check with your application vendor.

Hyper-Threading Technology requires a computer system with a processor supporting HT Technology and an HT Technology-enabled chipset, BIOS and operating system. Performance will vary depending on the specific hardware and software you use. For more information including details on which processors support HT Technology, see [here](#).

Intel® Turbo Boost Technology requires a Platform with a processor with Intel Turbo Boost Technology capability. Intel Turbo Boost Technology performance varies depending on hardware, software and overall system configuration. Check with your platform manufacturer on whether your system delivers Intel Turbo Boost Technology. For more information, see <http://www.intel.com/technology/turboboost>.

Intel processor numbers are not a measure of performance. Processor numbers differentiate features within each processor series, not across different processor sequences. See http://www.intel.com/products/processor_number for details. Intel products are not intended for use in medical, life saving, life sustaining, critical control or safety systems, or in nuclear facility applications. All dates and products specified are for planning purposes only and are subject to change without notice.

Result measured at 604417 BOPS - March 30, 2009.
- **SPECweb2005**
 - Baseline Intel® Xeon® processor X5460 based platform details: HP ProLiant DL380 G5 server platform with two Intel Xeon processors X5460 3.16GHz, 12MB L2 cache, 32GB memory (8x4G 667MHz ECC DDR2 FB-DIMM), RedHat Enterprise Linux 5 (2.6.18-53.el5), Rock Web Server v1.4.6 x86_64. Referenced as published at 29591. For more information see <http://www.spec.org/web2005/results/res2008q1/web2005-20080225-00104.html>.
 - Intel® Xeon® processor X5570 based platform details: HP ProLiant DL380 G6 platform* with two Intel Xeon processors X5570 2.93GHz, 8MB L3 cache, 6.4GT/s QPI, 144 GB memory (18x8 GB DDR3), Red Hat Enterprise Linux 5.2 .Rock Web Server v1.4.7 (x86_64). Result submitted to www.spec.org for review at 71,045 as of March 30, 2009.
- **Fluent:**
 - Baseline Intel® Xeon® processor X5482 based platform details: Supermicro X7DB8+* server platform with two Intel® Xeon® processors X5482 3.20GHz, 12MB L2 cache, 1600MHz FSB, 16GB memory (8x2GB 800MHz DDR2 FB-DIMM), 64-bit RedHat Enterprise Linux 5.3*. Performance measured using Fluent Version 12.0 Beta. (Version 12.0.13)*. Six individual benchmarks are shown as a measure of single node performance. "Overall" performance is the geometric mean of the six individual benchmarks.
 - Intel® Xeon® processor X5570 based platform details: SGI Altix ICE 8200EX* server platform with two Intel Xeon processors X5570 2.93GHz, 8MB L3 cache, QPI 6.4 MT/sec, 24GB memory (12x2GB 1066MHz DDR3), 64-bit Suse Linux Enterprise Server* 10 SP2 with ProPack 6SP2*. Performance measured using Fluent Version 12.0 Beta. (Version 12.0.9) Six individual benchmarks are shown as a measure of single node performance. "Overall" performance is the geometric mean of the six individual benchmarks.

Benchmark configuration details

- All comparisons based on published/submitted/approved results as of March 30, 2009
- **SPECCompM2001**
 - Baseline Intel® Xeon® processor E5472 based platform details: Supermicro X7DB8+ server platform* with two Intel Xeon processors E5472 3.0GHz, 12MB L2 cache, 1600MHz FSB, 32GB memory (8x4GB 800MHz DDR2 FB-DIMM), SUSE LINUX 10.1* (X86-64) (Linux 2.6.16.13-4-smp). Binaries built with Intel Compiler 10.1. Referenced as published at 17187. (SPECCompMbase2001). For more information see <http://www.spec.org/omp/results/res2007q4/omp2001-20071107-00274.html>.
 - Intel® Xeon® processor X5570 based platform details: Cisco B-200 M1 server platform* with two Intel Xeon processors X5570 2.93GHz, 8MB L3 cache, 6.4GT/s QPI, 24 GB memory (6x4 GB DDR3-1333MHz), Red Hat EL 5.3, Linux Kernel 2.6.18-128.el5 SMP x86_64, Binaries built with Intel® C/C++ Compiler 11.0 for Linux. Result submitted to www.spec.org for review at 43593 (SPECCompMbase2001) as of March 30, 2009.
- **SPECpower_ssj2008**
 - Baseline Intel® Xeon® processor L5430 based platform details: Powerleader PR2510D2 server platform* with two Intel Xeon processors L5430 2.33GHz, 12MB L2 cache, 1333MHz FSB, 8GB memory, Oracle JRockit* (build P27.5.0-5_o_CR371811_CR374296-100684-1.6.0_03-20080702-1651-windows-x86_64, compiled mode). Published at 1135 ssj_ops/watt. For more information see: http://www.spec.org/power_ssj2008/results/res2008q4/power_ssj2008-20081007-00086.html.
 - Intel® Xeon® processor X5570 based platform details: Verari Systems, Inc. VB1305 server platform* with two Intel Xeon processor X5570, 2.93GHz, 8 GB (4 x 2), Microsoft Windows Server 2008 Enterprise* Service Pack 2 OS. Oracle JVM (build P28.0.0-14-111048-1.6.0_05-20090303-1104-windows-x86_64, (compiled mode) result of 1943 provided by Verari as of 3/30/2009.
- **SPECjAppServer2004**
 - Baseline Intel® Xeon® processor X5460 based platform details: HP Proliant BL460c G1 server platform with two Intel Xeon processors X5460 3.16GHz, 12MB L2 cache, 16GB memory (8x2G 667MHz ECC DDR2 FB-DIMM), Oracle Application Server 10G Release 10.1.3.3 - Java Edition, BEA JRockit(R) 6.0 JDK (R27.3.0-106) (Linux x86 32bit), Oracle Database Enterprise Edition Release 11.1.0.6. Referenced as published at 2056. For more information see <http://www.spec.org/osg/jAppServer2004/results/res2007q4/jAppServer2004-20071023-00088.html>.
 - Intel® Xeon® processor X5570 based platform details: Dell PowerEdge R610 server platform* with two Intel Xeon processors X5570 2.93GHz, 8MB L3 cache, 6.4GT/s QPI, 24 GB memory (12x2 GB DDR3), Oracle WebLogic Server Standard Edition Release 10.3, Oracle JRockit(R) 6.0 JDK (R27.6.0-50) (Linux x86 32bit), Oracle Database Enterprise Edition Release 11.1.0.7, Result submitted to www.spec.org for review at 3975 as of March 30, 2009.
- **VMmark:**
 - Baseline Intel® Xeon® processor X5470 based platform details: HP Proliant* ML370 G5 server platform with two Intel Xeon processors X5470 3.33GHz, 2x6MB L2 cache, 1333MHz FSB, 48GB memory, VMware ESX V3.5. Update 3 Published at 9.15@7 tiles. For more information see <http://www.vmware.com/files/pdf/benchmark/VMmark-HP-2008-10-09-ML370.pdf>.
 - Intel® Xeon® processor X5570 based platform details: Dell PowerEdge* R710 Server platform with two Intel Xeon processors X5570 2.93GHz, 8MB L3 cache, 6.4GT/s QPI, 96 GB memory (12x8 GB DDR3-1066MHz), VMware ESX beta build 150817. Submitted to VMware for review at 23.55@16 tiles.

Xeon 5500 Refresh Slides (System Configurations)

- Performance tests and ratings are measured using specific computer systems and/or components and reflect the approximate performance of Intel products as measured by those tests. Any difference in system hardware or software design or configuration may affect actual performance. Buyers should consult other sources of information to evaluate the performance of systems or components they are considering purchasing. For more information on performance tests and on the performance of Intel products, visit Intel [Performance Benchmark Limitations](#)
- **Single Core to Xeon 5500 Refresh Configuration Details**
- Source: Intel internal measurements 2005 – 2008 comparing 2S Xeon 3.8GHz (Irwindale), 8x1GB DIMMs, 1 HDD, 382W power under load to 2S Xeon X5570 (Nehalem 2.93GHz), 6x2GB DIMMs, 1 HDD, 315W power under load.
- **Dual Core Xeon 5100 to Xeon 5500 Refresh Configuration Details**
- Source: Intel internal measurements 2005 – 2008 comparing 2S Xeon 5160 (Woodcrest 3.0GHz), 8x2GB DIMMs, 1 HDD, 354W power under load to 2S Xeon X5570 (Nehalem 2.93GHz), 6x2GB DIMMs, 1 HDD, 315W power under load.

Single Core Energy Efficient Refresh Calculation Details

	2005	2009	Delta / Notes
Product	Intel® Xeon® 3.8GHz with 2M cache	Intel® Xeon® X5570 (2.93GHz)	
Performance per Server	1	8.7x increase	Intel internal SPECjbb2005* measurements as of Feb 2009
Server Power Idle / Active Power	228W idle / 382W active	174W idle / 312W active	Server idle for 16 hours per day and active for 8 hours per day
# Servers needed	184	21	~ 9:1 server consolidation
# Racks needed	9 racks	1 rack	9:1 Rack Consolidation
Annual Server kWhr	451,474	42,515	90% lower energy costs
Total Annual Energy Costs	\$90,294	\$8,502	\$81,792 electricity costs per year. Assumes \$0.10/kWhr and 2x cooling factor
Operating System Licensing Costs	\$165,600	\$18,900	\$146,700 less per year Assumes a RHEL 1yr license at \$900 Source www.dell.com as of 12/16/08
Annual Cost Savings of \$228,854			
Cost of new HW	n/a	\$147,000	Assume \$6,900 per server
Payback Period of 8 months			

Single Core Performance Refresh Calculation Details

	2005	2009	Delta / Notes
Product	Intel Xeon single core (3.8Ghz w/ 2M cache)	Intel Xeon 5500 series (2.93GHz)	
Performance per Server	50,970 bops SPECjbb2005*	447,000 bops SPECjbb2005*	bops = business operations per second
Power Consumption per Server	382W active	315W active	Server active 24hr per day (assuming HPC application)
Data Center Capability = 1 MW			
DC Cooling Factor	1.6 PUE	1.6 PUE	Same Design PUE := Power Usage Effectiveness.
# of Servers	1,637	1,637	Same Footprint
Data Center Performance	83,437,890 bops	731,739,000 bops	Up to 8.8x Performance Increase
Data Center Power	1,000 KW	825 kW	Estimated 18% Lower Power # of Servers * Svr Power * PUE

For 50% Lower Platform Idle Power

Configuration details for 50% lower idle power: Intel internal measurements of 221W at idle with Supermicro 2xE5450 (3.0GHz 80W) processors, 8x2GB 667MHz FBDIMMs, 1x700W PSU, 1x320GB SATA hard drive vs. 111W at idle with Supermicro software development platform with 2xE5540 (2.53GHz Nehalem 80W) processors, 6x2GB DDR3-1066 RDIMMs, 1x800W PSU, 1x150GB 10k SATA hard drive. Both systems were running Windows 2008 with USB suspend select enabled and maximum power savings mode for PCIe link state power management. Measurements as of Feb 2009.

For Virtualization Performance

- Up to 2.10x Virtualization performance compared to Xeon 5400 series claim supported by performance results on VMmark* benchmark. Xeon X5470 data based on published results. Xeon X5570 Intel internal measurement. (Feb 2009)
 - Configuration details: - VMmark benchmark
 - Baseline Quad-Core Intel® Xeon® processor X5470 based platform details: HP Proliant ML370 G5 server platform with two Quad-Core Intel Xeon processors X5470 3.33GHz, 2x6MB L2 cache, 1333MHz FSB, 48GB memory, VMware ESX V3.5. Update 3 Published at 9.15@7 tiles.
 - New platform: Intel preproduction server platform with two Quad-Core Intel® Xeon® processor X5570, 2.93 GHz, 8MB L3 cache, 6.4QPI, 72GB memory (18x4GB DDR3-800), VMware ESX Build 140815. Performance measured at 19.51@ 13 tiles
