Intel® Entry Storage System SS4000-E

Branch Office Data Storage

Intel® Entry Storage System SS4000-E

The Data Storage Challenge

Storing, protecting, and backing up your company's files and irreplaceable business documents is a critical need for any company with multiple offices. Protection of your most important data should be a high priority in your branch operations. Many offices find that backing up files over VPN is frustrating, as the network can often be slow or unavailable.

Protecting critical data for multiple offices is challenging, especially when it may need to be retrieved later by someone in another office. Managing paper documents, files stored off-site, and digital files can create extensive storage needs.

A Single Storage System for Each Branch Office

The Intel® Entry Storage System SS4000-E gives your branch offices the assurance that data is safe from unauthorized access and protected from damage or loss. The SS4000-E is a cost effective solution that allows each office to schedule backups automatically. This Network Attached Storage (NAS) device is so affordable that most companies can afford to purchase one for each branch office.

Store More. Protect More. Save More.

Organizations today are inundated with data. From email and word processing to file retention and disaster recovery planning, this influx of data has resulted in an increased need for storage.

The Intel® Entry Storage System SS4000-E is an intelligent network storage system for small office, medium office, and home network environments. Contact us today for more information.
