## AC450NX MP Server System

May 19, 1999

**To:** AC450NX MP Server System OEM Customers

**From:** HESD Product Marketing

**Reference:** AC450NX/Cabot (Polar) to OCPRF100/Cabot (Saber) Upgrade Procedure

A white paper titled, "AC450NX to OCPRF100 Upgrade Procedure," is now available from your Intel Sales or Support Representative. This document describes the technical requirements to upgrade the system hardware from a 4-way AC450NX/Cabot (Polar) system to an 8-way OCPRF100/Cabot (Saber) system. Please note, upgrade requirements specifically require replacement of power supplies that have the part number 676912-004. Power supplies with the part number 676912-007 can be used in both the AC450NX server system and the OCPRF100 server system.

Intel Corporation supports the hardware upgrade of your systems from the AC450NX to the OCPRF100 design. Each OEM is responsible for supporting their own custom configurations, and for installing and qualifying operating systems and applications on the upgraded system. Due to the contingencies of converting systems, which may include operating system, BIOS, Firmware management, chassis and board disassembly/re-assembly, which must be performed by a properly trained technician, Intel will not provide an AC450NX to OCPRF100 upgrade kit.

The "AC450NX to OCPRF100 Upgrade Procedure" document contains a list of the required components necessary to effect the upgrade. These components are offered by Intel as OCPRF100 product line items.

If you have questions or concerns, please contact your Intel Sales or Support Representative.
