1.1	June 25, 2019	Final revision.
1.0	June 7, 2019	Initial release (Intel Confidential).

## 1.0 Introduction

---

This document describes the Dynamic Device Personalization (DDP) functionality supported by the Intel® Ethernet Controller X710/XXV710/XL710 starting with firmware version 6.01.

The DDP profile (0x8000000C) contains the X710/XXV710/XL710 parser graph for MPLS.

MPLS tunneling is established in NFV deployments today.

MPLS connects with the existing router, and the MPLS profile can inspect the tunnel header so that traffic can be directed into multiple queues, which can later be processed by multiple cores.

**Table 1-1. Terms and Definitions**

Term	Definition
DPDK	Data Plane Development Kit

**Table 1-1. Version History**

Version	Description
1.0.0.0	Initial release of mplsogreudp parser graph for the X710/XXV710/XL710.

**Table 1-2. Firmware/NVM Support Matrix**

FW Version	NVM Map Version	Description
6.01	6.36	Operating system and device independent.
6.02	6.48	
7.0	8.77	

**Table 1-3. MPLS Packet Field Vector**

Word Num	Protocol Layers			
	<b>L2 Protocol Layers</b>			
0:2	Destination MAC address (in outer or single L2 header).			
3:5	Source MAC address (in outer or single L2 header).			
6	0x00			
7	0x00			
8	0x00			
	<b>L3 Protocol Layers</b>			
	<b>Inner IPv4</b>			
9	First 8 words of the IPv4 header (up to including the source IP address).			
10				
11:12				
13:16				
17:20				
21:22	0x00			
23:26	0x00			
27:28	Destination IP address.			
	<b>L4 Protocol Layers</b>			
	<b>TCP</b>	<b>UDP</b>	<b>SCTP</b>	<b>ICMP</b>
29:30	First 16 bytes of the TCP header.	First 8 bytes of the UDP header.	First 8 bytes of the SCTP header.	Words 0, 1 of the header.
31:32				0x00
33:36		0x00	0x00	
	<b>DPDK Outer VLAN for QinQ</b>			
37	S-tag (DPDK)	S-tag (DPDK)	S-tag (DPDK)	S-tag (DPDK)
	<b>MPLS Tunnel Layer and Flexible Payload</b>			
38:41	0x00			
42:43	0x00			
44:45	MPLS label			

**Table 1-3. MPLS Packet Field Vector**

MPLS Tunnel Layer and Flexible Payload	
46:49	0x00
50:57	Outer destination IP address or flexible payload.

Note: DPDK (up to release 17.11) forces flexible payload to the first 16 bytes of the payload and overrides the outer destination IP address. Starting from DPDK 18.02, the flexible payload is extracted only if enabled by the flow director configuration.

**Table 1-4. Packet Classifier Types and Its Input**

	The recipe does not add new PCTYPE		

**Table 1-5. Packet Types**

	The recipe does not add new PTYPE
